

Project Business

Your Charging Project.
Our Expertise.
Our Passion.

Always with one
goal in mind

to make the most out of your Intra- logistics

Increase your efficiency and reduce your handling efforts

Our robust, high-quality battery charging solutions help you to reduce downtimes and ensures highest operational readiness. Our fast and easy battery changing, solutions think out of the box to keep your fleet always running.

Optimize your available space

Experience our space-savers. The compact design of our charging components saves you valuable space in your storages.

Be more flexible and future-ready

Our high-quality charging solutions can be easily reused, expanded, and combined in multiple of ways.

Reduce your costs

Profit from less ongoing costs, less time and handling efforts with our Fronius battery changing equipment or battery water system.

We've got your back

from day one -
customer specific
and scalable

Maximum availability
of your trucks

Reduce risks of fire spread

Energy and cost efficient
operations

Safety and standard compliant

Protection concepts for your
workforce

Comprehensive
Advice

Personalised
Planning

Assembly by
our Experts

Support during
Operations

1

Analysis

Assessment of the current situation on site including potential saving analysis and standard compliance check.

Benefits for our customers

- Identify potential energy savings
- Support in safety-critical matters
- Cost reduction through savings on back-up batteries

2

Planning

Customer-specific standard compliant planning of entire battery charging solutions incl. creation of layout plan.

Benefits for our customers

- Optimised planning of battery charging solutions based on the inventory
- Compliance with technical and legal standards and specifications

3

Realization

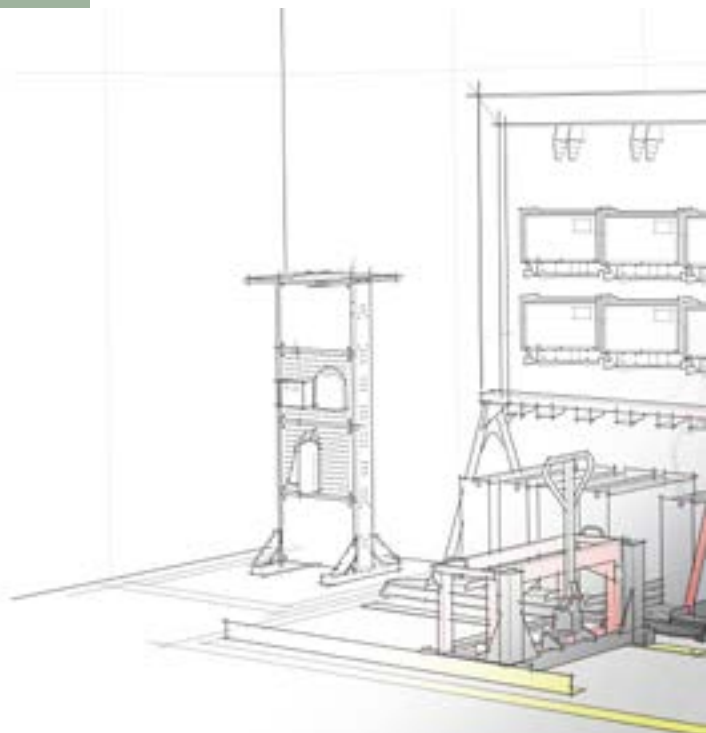

Realization of project management incl. coordination of subcontractors, acceptance of the entire system, documentation and on-site staff training if required.

Benefits for our customers

- Installation, acceptance and commissioning of turnkey charging solution
- One contact throughout the entire project
- Reduction in administrative work load for the customer and focus on core business
- TÜV certificate if required

Ongoing Support

Our support offer consists also of regular service and maintenance of your charging infrastructure, ongoing optimization of further enhancements as well as additional saving potentials to maximize your charging infrastructure performance.

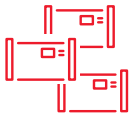

n a single Source

Single charging stations

Sometimes single charging stations are the best spot for energizing your forklift. They are especially space-saving designed and can be placed at strategically important spots allowing easy handling.

Charging rooms and battery changing stations

When you run an entire forklift fleet, your warehouse needs a designated forklift charging station. Especially when space is limited, smart charging rooms solutions that reduce your needed space up to 50 % while optimizing your energy costs are required. Reduce your handling efforts and battery investments with our Fronius charging solutions.

Outdoor charging solutions

Running out of space on short term? Or having special requirements? We do indoor as well as outdoor charging. We'll advice you on small charging spots as well as complete charging rooms that can be ran outdoors too.

Digital charging solutions

With Charge & Connect you can go beyond the limits of conventional charging. Experience Load Balancing and actively optimize your loads or connect your charging infrastructure with your PV to minimize your ongoing costs and CO2 footprint.

Time is money

The customer challenge: The charging infrastructure was decentralized, partly with long travel ways and huge battery changing efforts. This let the customer long for a new, more efficient, and time-optimized charging infrastructure.

Our solution: With our rack system incl. transfer carriage, we could reduce its battery exchange time up to 80%. Now the exchange process takes 2 minutes for one only.

Overhead Charging

The customer challenge: Due to very limited space in the warehouse the charging infrastructure of our customer was located in the souterrain. Consequently, the battery charging was very inefficient and time consuming.

Our solution: Together with the customer we invented an innovative, unconventional charging solution to boost productivity, and ultimately improve warehouse organization. Our overhead charging solution fully fulfilled our customers' requirements within the limited space.

Outdoor Charging

The customer challenge: Limited space indoors as well as special fire protection requirements posed major challenges to our customer.

Our solution: Together with the customer we invented a standard compliant outdoor charging solution meeting his special requirements.

Made with Passion

Thinking Beyond Charging

Who we are

A brilliant idea signaled the start of our journey: Günter Fronius build the first device to recharge car batteries, allowing them to be used for longer. Today, more than 75 years later, Fronius Perfect Charging charges batteries cost-effectively and sustainably - for maximum availability of industrial trucks and AGVs. We are constantly extending our offer to maximize our customer's value – connecting our charger to the future.

What drives us

We signify innovative, sustainable charging solutions that create value today and provide answers for the challenges of tomorrow.

For us, shaping the future means thinking ahead, beyond charging. Connecting the analog and digital world. And making our contribution to CO2-neutral intralogistics.

Together with our customers, we want to break exciting new ground, create solutions that reconciles sustainability and efficiency in intralogistics.
